

Dear cyber friend!

I'm very sorry that i couldn't work with 3d programs, so excuse me for that sketches

Here` the comments considerind execution:

1. general view.

the stage with musicians is situated inside the sphere that looks as a hybrid of soap bubble and the saturn planet. spere is moving around itself (but the stage inside remains still because it isn't connected directly to the bubble). you can come inside by the concentrated circles around the planet. you can enter inside the bubble by touching its surface. (so the entire equator zone is an entry) i will send you the samples for bubble structure.

2.what`s inside.

do you remember how wax lamp looks like? the pieces of rainbow-coloured waxlike substance are generating on the inner surface of the bubble. they are slowly moving like snow. when they touch the surface of the sphere or the floor they are slowly sucked in. when they touch each other they interfere.

the audience can move around the stage and towards the floor.

3.different

-the substance of musicians and instruments is slightly transparent (about 25-15%)

-the proportions of musicians and instruments considering each other are as on the sketches.

about the movement of musicians i will write later. good bye!
